

Model 524-DC/SR4 with Rip Navigator Scout

Destination Profit

Up to 10 - 16' boards per minute

The flexibility of up to four shifting blades for the ultimate in production control and increased efficiencies

Up to four shifting blades with an optional center fixed blade

Fewer rejects Better yield from your raw materials

Track operator / shift / vendor / performance Less rework

Three modes of operation:

Yield mode to maximize fiber recovery

Value mode that allows you to quantify a dollar value for needed components

Manual mode for times when inventory is more important than yield recovery

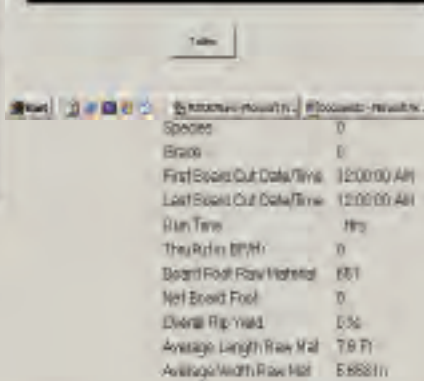

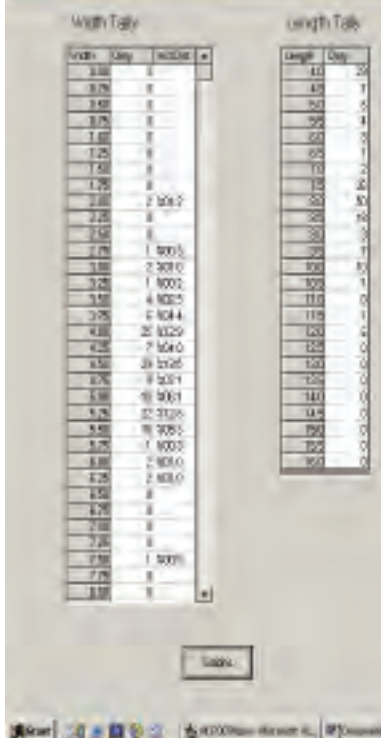

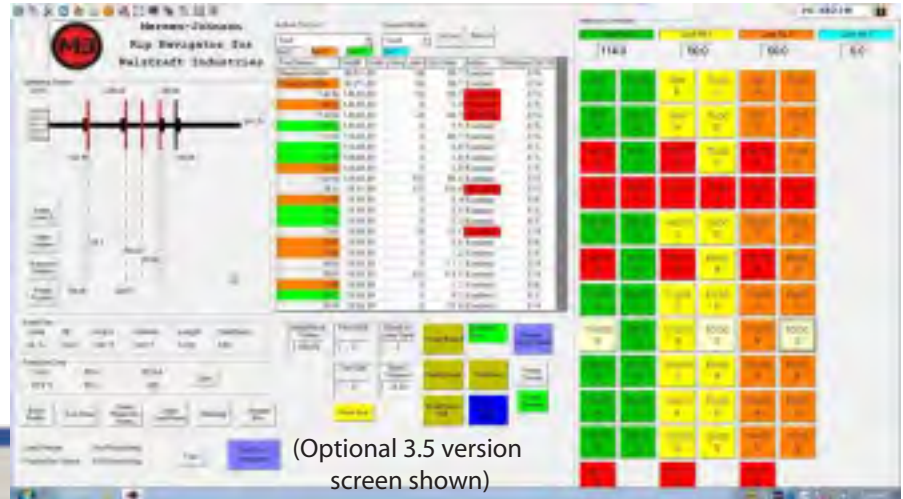

Optional 3.5 version software combining enhanced manual intervention with computer solutions

Manage the many factors that influence your bottom line

Imagine having the RIGHT parts WHEN you need them!

Getting good yield won't mean much unless you're producing the parts you need from your raw materials. Rip Navigator provides production flexibility with three modes of operation: Yield mode to maximize fiber recovery, value mode that allows you to quantify a dollar value for needed components, and manual mode for times when inventory is more important than yield recovery.

Optimize your business! Rip Navigator is a powerful tool to track production performance.

You control how reports are compiled choosing variables that are important to your business performance. Track performance by any combination of operator, vendor, species, shift, material thickness, grade, or individual load. Get the system that will streamline your production, enhance operator safety, reduce waste, improve feeding accuracy, minimize rework, and increase your profits!
