

MEREEN-JOHNSON

Leading Technology - Lasting Performance

Rip Navigator **TRACKER** Rip Optimizing System

A NEW DIRECTION IN RIP OPTIMIZING

Manage the many factors that influence your bottom line

Imagine having the RIGHT parts WHEN you need them!

Getting good yield won't mean much unless you're producing

the parts you need from your raw materials.

Rip Navigator provides production flexibility with three modes of operation:

Yield mode to maximize fiber recovery, value mode that allows you to quantify a dollar value for needed components, and manual mode for times when inventory is more important than yield recovery.

Increased Yield

Enhanced Safety

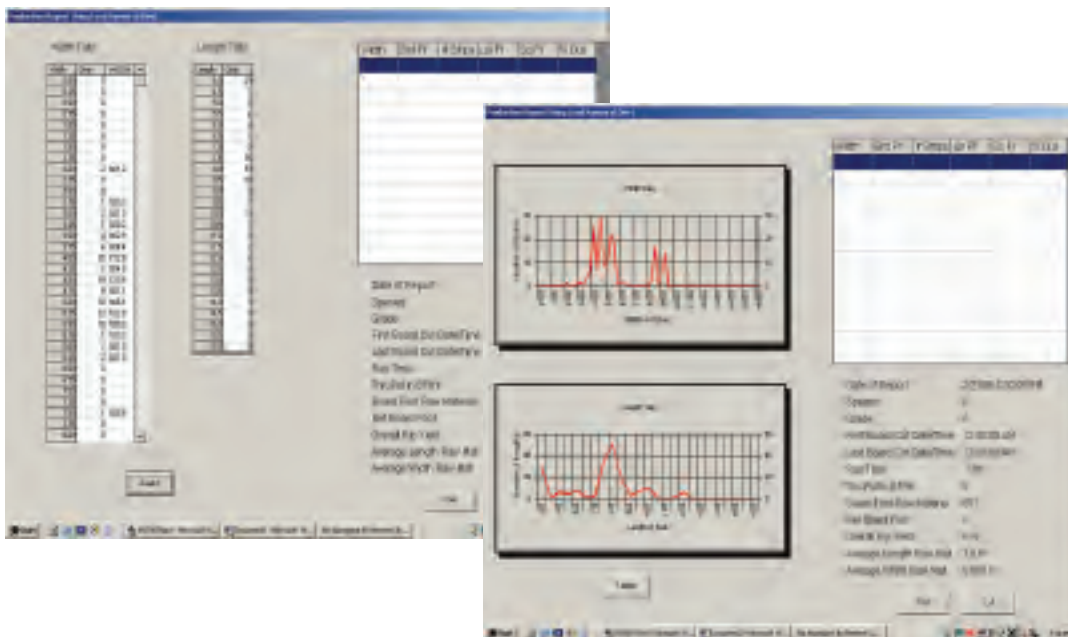

Higher Efficiencies

Greater Production Flexibility

Less Rework

Fewer Rejects

Better Feeding Accuracy

Optimize your business!

Rip Navigator is a powerful tool to track production performance.

You control how reports are compiled choosing variables that are important to your business performance.

Track performance by any combination of operator, vendor, species, shift, material thickness, grade, or individual load.
